Reasons For Allowance

Claims 1 – 46 are allowable.

1. The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claims the prior arts made of record fail to suggest a current steering digital-to-analog converter that comprises a control circuit to reduce a variation of a voltage present at a summing node of each of current steering segments in response to a difference in the voltages present at the positive and negative outputs, and the switching of at least one of the differential transistors. In combination with other limitations of the claims the prior arts made of record fail to suggest a method of converting an input digital signal to a differential analog output signal that reduces variations of voltages present at summing nodes in response to a difference in the voltages present at the positive and negative outputs and to a change in the steering of at least one of the currents between the positive and negative outputs. Also, in combination with other limitation of the claims the prior arts made of record fail to suggest a current steering digital-to-analog converter in which a reference voltage source comprises a diode-connected transistor electrically connected between an input terminal and a constant voltage terminal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
3. Hallgren (US Patent Number 4,683,458) discloses a current steering DAC for providing bi-directional currents through a load.
4. Jackson et al. (US Patent Number 5,243,347) discloses a monotonic current/resistor DAC and method of operation.
5. Ta (US Patent Number 5,293,166) discloses a DAC and bias compensator therefor.
6. Lueng (US Patent Number 5,548,288) discloses a BICMOS current cell and switch for DACs.
7. Moreland et al. (US Patent Number 6,304,201) discloses a precision DACs and methods having programmable trim adjustments.
8. Dedic et al. (US patent Number 6,496,129) discloses a segmented circuitry.
